

A regional emergency alert system is available throughout Pima County:
www.SafetyAlertGPC.com

“SafetyAlertGPC,” similar to an outbound 911, allows residents to sign up for emergency and severe weather alerts by voice, text and e-mail for a variety of situations.

Emergency responders and public safety personnel can use “SafetyAlertGPC” for additional notification of a situation that immediately threatens lives and property.

“SafetyAlertGPC” can also be used for notice of regional flooding, natural gas outages and service restoration, electrical outages, chemical spills, and public health crises, instances when communication to residents has a high priority.

System options allow responders to customize a notification for an affected area by jurisdiction, zip code, neighborhood and geographical boundaries, street and road parameters, etc.

The Tucson Urban Areas Security Initiative (TUASI) is overseeing “SafetyAlertGPC” implementation and operation. This vital service has been funded by the U.S. Department of Homeland Security.

“SafetyAlertGPC” is established in the jurisdictions of Pima County, City of Tucson, City of South Tucson, Town of Marana, Town of Oro Valley, Town of Sahuarita, Tohono O’odham Nation, and Pascua Yaqui Tribe.
